

## ACKNOWLEDGEMENTS

This research project has been a very enlightening and rewarding experience for me in an area that is of great personal interest. I would like to acknowledge and express my gratitude to three groups of people who provided generous amounts of support and cooperation during this scholarly endeavor.

First, I have benefited greatly from the never-ending patience, guidance, and encouragement from the members of my thesis committee. Each of them gave me the support and latitude that made it possible to link these two research areas. Thank you Dr. Gibson for your never-ending encouragement and support for my scholarly pursuits. Thank you Dr. McGuire for your insights and for being willing to serve on my committee. Thank you Dr. Snelling for being the inspirational link that kept me grounded to the real world of health promotion.

Second, I have received tremendous support from my family, friends, and colleagues throughout this process. This journey would not have been possible without the succor and sacrifices that were made by those individuals on my behalf. During this process I have gained a deeper appreciation of the preciousness of the gift of love, the joy of discovery, and the thirst of knowledge that my parents instilled in me. Thank you Mom and Dad. My wonderful wife Jeanne has endured the countless hours and

distractions that have been necessary as I worked on my class readings, assignments, and this thesis over the last three years. Thank you Jeanne. The faculty and staff of the National Center for Health Fitness have been gracious and supportive, and have indulged me as I worked thorough this project and degree. Thank you especially Drs. Karch, Snelling, and Schaeffer and Linda Swanson. Several other colleagues have been extremely helpful in process of developing and field testing the instrument including Dr. Crespo, Shea VanHorn, Shannon Swift, Monica Riggi, and many of the graduate students from the Health Fitness Management program. I am very thankful to Wolf Kirsten, Bill Hettler, Mike Casey, Dan Newton, Sue Liebenow, Holly Morganti, Jennifer Posa, Harold Denlow, Margaret Hawkins, and David Stevenson for their advise, insights, and willingness to serve on the expert panel. Finally, the patience and support from many family members and a stellar cadre of friends has been enormously important to me while I have been engaged in the thesis process. Thanks to all of you.

Third, I have benefited greatly from the challenging coursework at American University and from the wisdom of a very cooperative group of professionals in the fields of health and IT. First, the professors from the Computer Science and Information Sciences Department at American University have provided me with an engaging and flexible learning environment that has allowed me to explore the IT related-topics in the healthcare arena that have been most interesting to me. Second, I owe a tremendous thank you to Dr. Michael O'Donnell and his conference staff for their cooperation and assistance in this research project. I am deeply indebted to Dr. O'Donnell for making the

thesis possible. I hope that others will find this work to be a worthwhile contribution to the body of science in this often-neglected area.

## TABLE OF CONTENTS

ABSTRACT.....	ii
ACKNOWLEDGEMENTS.....	iii
LIST OF TABLES.....	vii
Chapter	
1. THE PROBLEM AND ITS CONTEXT.....	1
Introduction to the Problem.....	1
Statement of the Problem and Its Context.....	2
Rationale and Significance of the Study.....	7
Research Questions.....	9
Definition of Terms.....	10
Assumptions.....	10
Limitations.....	11
Organization of the Study.....	12
2. THE REVIEW OF THE LITERATURE.....	13
Introduction to the Literature.....	13
