ANC Meeting
October 7, 2015
Saturday Work

Daily Precipitation (days)

- 11.2 days of precipitation more than normal
- 6.01 total inches of precipitation more than normal
- 33 total work days impacted by precipitation

Source: NOAA - Dalecarlia Reservoir Station
Impact on project

- 33 or 30% of the 109 available work days (M-F) between April and September were impacted by precipitation

- Critical path weather-dependent activities (excavation, geo-piers and concrete) were impacted and delayed during this period

- 17 Saturdays, or half the 33 days impacted, remain until the last of the above ground structures is completed

- Delay in the completion of these construction activities has shortened the amount time available to complete subsequent and sequential activities and has jeopardized the timely completion of the project
