

Cut out to
hang on door

During November, students in the residence halls are competing to reduce their electricity usage. I pledge to join in and do these five things:

1. Do it in the dark. Turn off the lights.

I will turn off lights whenever I leave a room or see lights on in any unoccupied common area such as hallways, lounges, bathrooms, and laundry rooms.

2. Stop sucking. Zap your energy vampires.

Appliances suck energy even when they're turned off. I will unplug things like TVs, microwaves, computers, and cell chargers when they are not in use.

3. It's Getting Hot in Here!

Heating hogs energy. I will turn the heat to low (68 F if your room has temperature control), turn the fan to low, and will be sure to close windows tightly when I leave the room.

4. Chill out. Turn down the fridge.

It takes a lot of juice to keep the fridge humming 24/7. I will turn down the temperature setting in my fridge or unplug it when it's empty.

5. Step it up. Take the stairs.

Elevators send energy use to the top floor. I will skip the ride and take a stride up the stairs. You'll burn some calories too!

Signature: _____

The hall that reduces energy consumption by the greatest % will be awarded with a chocolate fountain dessert party!
