Reconsidering Wilkinson’s Income Inequality Hypothesis: New Evidence from Argentina

Fernando De Maio, PhD
Assistant Professor
Department of Sociology, Depaul University

Dr. De Maio holds a PhD from the University of Essex. His work examines the social determinants of health with ongoing research projects on the health effects of income inequality and the health transitions of immigrants. In recent years he has studied the social patterning of chronic non-communicable diseases in Latin America and has worked in collaboration with colleagues in Argentina’s Ministry of Health. His work has appeared in Global Public Health, Critical Public Health, Health Sociology Review, the International Journal for Equity in Health and Population Health Metrics. He is the author of Health and Social Theory (Palgrave Macmillan) and is currently working on his second book, Global Health Inequities.

November 2. 2:30 p.m. Battelle T-30
