

## **OVERVIEW**

IncentFit offers integrations with ALL the major fitness trackers in the market so that we can automatically get data from those devices.

It's powerful for two main reasons:

- 1. It's easy to use for employees.
- 2. It's very hard to cheat.

# WE INTEGRATE WITH THESE BRANDS

# INCENTFIT STEP TRACKING

<u>Apple Health</u> comes pre-installed on all iPhones. <u>Google Fit</u> comes pre-installed on all Androids.

 These apps were made by Apple and Google to automatically track steps very accurately and efficiently using just the smartphone.

When the IncentFit app is first installed, it will prompt all users to connect to one of these services.

All users get accurate step-tracking just by installing the IncentFit app.

### USER EXPERIENCE

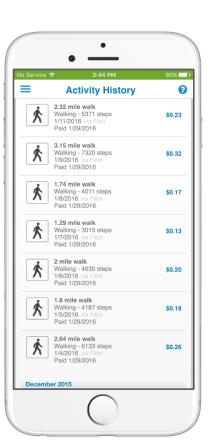

If the user wants to connect their Fitbit or other tracker/app, they do this once:

- 1. Open up the "Walk, Run, Bike" section of the IncentFit app or website.
- 2. Click "Connect" by the desired device.
- 3. Follow the instructions.

Going forward, just use your device/app!

### MORE APPS & DEVICES MEANS...

#### Ease of use

nothing kills utilization faster than forcing employees to manually report activity

#### Promotes exercise

focus on exercise, not tracking

### Accuracy

tracked by a sensor, not guesstimated

### Speed

most integrations report data every few minutes

#### Trust

builds trust that people aren't cheating the system

## ARE WE MISSING ANY?

We rely on our customers to tell us which integrations to build next.

If you have a suggestion, please email <a href="mailto:support@incentfit.com">support@incentfit.com</a>
